

cytoactiv® HPV-L1 risk profile

for HPV high risk/p16 positivity

Shown are the **cytoactiv®** risk profiles for CIN2+/CIN3+ and HPV high risk or p16+ ASC-US resp. LSIL/HSIL.

① If there is a L1 positive ASC-US, the risk for CIN2+ is 8.3% (transient HPV infection).

If there is a L1 negative ASC-US, the risk for CIN2+ is 55% (precancer).

② If there is a L1 positive LSIL, the risk for CIN3+ is 7.7% resp. 29.7% in a L1 positive HSIL.

If there is a L1 negative LSIL, the risk for CIN3+ is 82.5% resp. 95.8% in a L1 negative HSIL.
